Then evening game drive back to ur hotel at paaara

## ECLIPSE CHASERS IN UGANDA

From 13:00 To 15:49EC

On November 3, 2013, a total hybrid solar eclipse will be visible across Ethiopia, Kenya Uganda, and Democratic republic of Congo. This eclipse will be annular only for a few kilometers at its start with duration of less than 1 second. For the remainder it will be a very narrow and short-lasting total eclipse, with maximum duration around 1½ minutes and with a maximum path width of only 58 km. So this eclipse is unusual as its starts annular and ends total, never reverting to annularity. With a 75 percent of possible sunshine, strong confirmation of a pronounced decline in cloudiness toward the eastern end of the eclipse track, though the value is so high as to

invite a little suspicion which results to a very high resolution which makes it the best point to be during this time of event. The special nature of this eclipse is that along the areas where the annular eclipse is visible mountains along the lunar profile will create a broken ring. The same will apply along the areas where totality is expected but in reverse, lunar valleys along the profile might let bright sections of the chromospheres and photosphere through creating a multiple diamond ring effect.

uganda will be an exciting part of astrological history because the country lies on the path of a hybrid solar Eclipse.

A total eclipse occurs when the dark silhouette of the moon completely obscures the intensely bright of the sun ,allowing the much fainter solar corona to be visible.

According to < NASA > United States National Aeronautics and Space Administration, 3 November around 13.00 hrs , during the maximum phase of a total eclipse , the sun,s disk will be completely blocked.

The sun,s faint corona is then seen by an human eye.During any one eclipse,totality occurs at best in a narrow track on the surface of the earth , uganda having best among others the best sight around Lake Albert at Packwach in nebbi district in west Nile near Murchison fall national park, Gulu town , Soroti town ,kotido town in karamoja region.

3 november eclipse is even more unique because the central path begins annular and ends total .

Talk of the day at paara lodge for a wonderful scenary of your life while at packwach looking at eclipse.

### 4 NOVEMBER

After breakfast , drive along the albertine rift valley to butiaba former port now a fishing Village on lake albert .

Drive through the rift valley to bisso to bunyoro kingdom to hoima for lunch then After noon driven back to kampala for over nite at pope hotel. Meal plan DBB
